

Don't let the Cat out of the Van

Secure your catalytic converter

Commercial Vehicles like the Mercedes Sprinter are being targeted by thieves for their catalytic converters – which can be removed in minutes.

Designed specifically for the Sprinter, CatSecure protects your catalytic converter against unauthorised removal or attempted theft. A high-security bonnet lock prohibits access to the engine compartment, even in the event that the window is smashed and the bonnet lever activated, whilst a specially designed plate shields against cutting or grinding from the underside of the vehicle – making it almost impossible to reach, let alone remove the cat.

CatSecure

Product Information

Theft of Catalytic Converters has risen by 400% since 2010, due to the inflated scrap value commanded by precious metal content. The Mercedes Sprinter has been one such target for thieves, where the cat can be removed in minutes.

CatSecure is designed to protect against the most common methods of catalytic converter theft. Built around the same technology used within our industry leading locking systems, a key operated bonnet lock guards against unauthorised access to the engine compartment, whilst a specially designed plate shields against attack from underneath the vehicle.

Features

- Developed in direct response to customer demand, after repeated attacks
- Designed to combat known methods of attack/theft
- Key operated bonnet lock manufactured specifically for Euro 5 model Mercedes Sprinter (2009 onwards)
- Once CatSecure is fitted only authorised personnel can open the bonnet and gain access to the engine compartment
- Ensures the bonnet catch cannot be released even in the event that vehicle windows have been smashed to operate the bonnet release
- Features high security KABA series 20 key system with over 1,000,000 key combinations
- Under-mounted plate guards against any attack from underneath the vehicle
- Lightweight, perforated protection plate design – to aid the airflow around the cat
- Quick & easy installation – takes just a few minutes to fit

Key Points

Catalytic Converters have a high scrap value due to precious metal inside, including platinum, rhodium and palladium.

Replacements can cost around £2,000.00, not to mention the cost of vehicle & driver downtime, additional damage, hire vehicles, increased insurance premiums & loss of business.

Commercial vehicles, such as the Sprinter are being targeted by thieves – where the cat can be removed in minutes.
