HookLock Pro

A mechanical high security deadlock to protect cargo areas

A manual, key operated locking system, the VanGuard HookLock offers an alternative to traditional van deadlocks, offering an enhanced level of protection.

Featuring a claw style locking bolt, the mechanism 'hooks' around the locking keep when engaged thus when under attack it becomes more difficult to defeat the locking bolt.Our vehicle specific protection plates also provide greater resistance when exposed to prolonged attack, optimising locking strength and protection for your vehicle. HookLocks can be fitted to all doors of a traditional panel van and can be supplied with identical high-level security keys for ease of use.

MAPLE

HookLock Pro

There has been a sharp increase in load theft and attacks on panel vans in recent years. The VanGuard HookLock has been designed to offer enhanced protection to van doors and combat common methods of attack.

Operating independently of the existing manufacturers system, the HookLock Pro offers a greater level of protection than a standard deadlock, providing a convenient and effective security upgrade to a panel vans cargo area.

Each lock has been specifically designed for individual vehicle models, thus providing optimum security and delivering peace of mind to the operator.

Key Features & Technical Information

- Manual locking application fitted independently of vehicles OE locking system
- Features a claw / hook style locking bolt that provides optimum protection against common methods of attack
- Specially designed locking keeps offer greater reinforcement when exposed to attack
- Bespoke design for each individual make and model of vehicle
- High security, anti-drill and anti-pick locking cylinders
- Master key systems available
- Low level of maintenance required
- Compatible with all popular panel vans
