Turtle Lock

A heavy-duty trailer door locking solution designed for barn door and swing door applications.

The Turtle lock is ideal for long haul and single A to B delivery operations, where the load area needs to be secured while the goods are in transit. This operationally robust security solution deters any opportunist thief or migrant from entering your trailer.

MAPLE

Turtle Trailer Lock

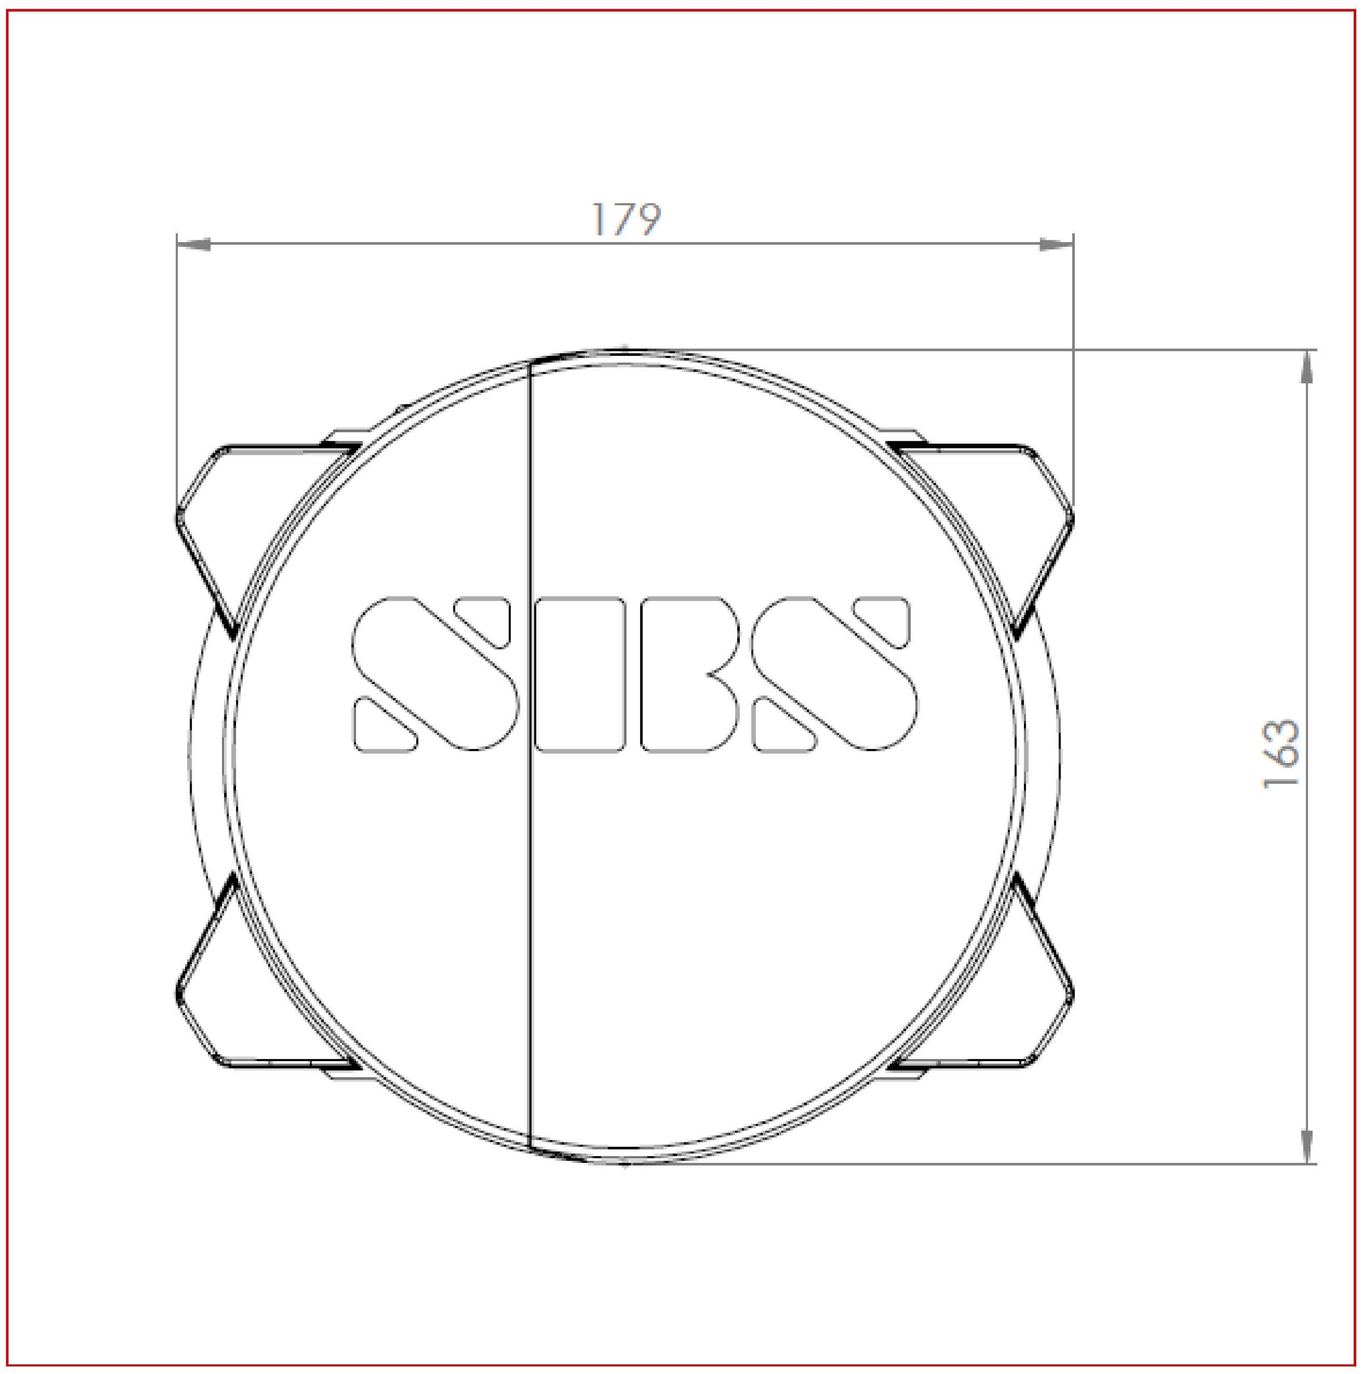

The Turtle Lock is a cost-effective and user-friendly locking solution that has been designed to protect load areas against load infiltration and theft. It is an effective solution that has been proven in the field over many years, with thousands of units fitted right across Europe.

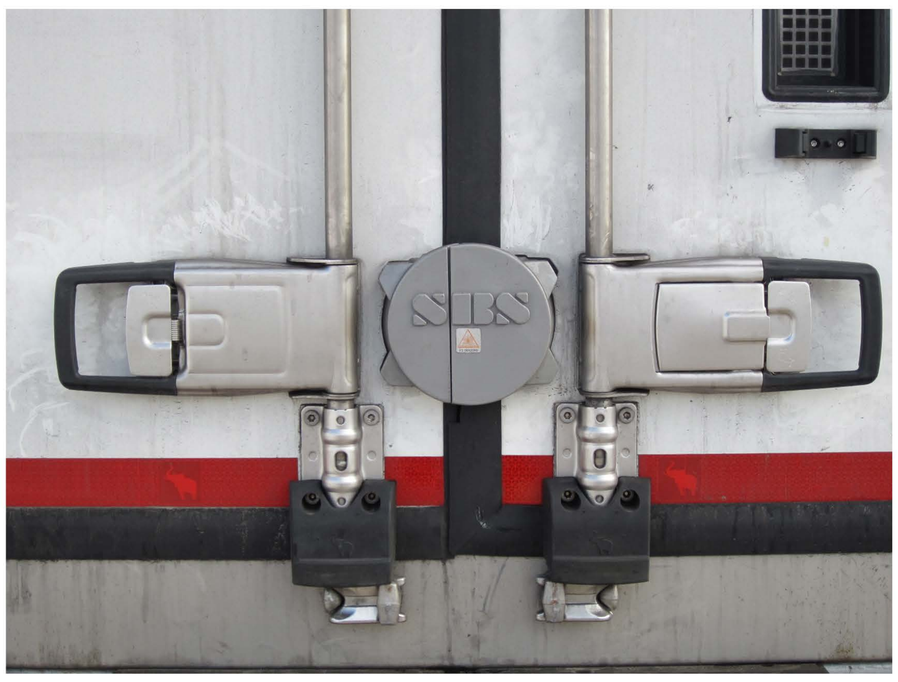

The lock hasp consists of 2 parts with one part fitted to each of the opening doors using anti-tamper high strength bolts, or each part can be welded directly to the vehicle door.

In operation, to secure the lock in place, once both doors are closed the shackle is inserted from the top and a high security padlock from the bottom, securing the load area against unauthorised access.
